

Leo Murphy

Leo manages Trading Technologies' University Program. The University Program's goal is to equip schools with TT's X_TRADER® software through corporate software donations. Universities in turn apply the software to their curriculum as they see fit. The experience has been that by donating the software universities benefit from its use while TT benefits from the university's feedback and application.

Leo began his career as a broker in fixed income futures and options for Merrill Lynch at the Chicago Board of Trade. He was a senior economist in research and development for the CBOT before coming to Trading Technologies to manage the University Program. He currently is an adjunct faculty member at Benedictine University (Lisle, Illinois) and Lewis University (Romeoville, Illinois) teaching economics.
