

Greg began his power pursuits as an undergraduate Mechanical Engineering student at Tulane University. While employed at Entergy Corporation, Greg pursued his degree with a focus in Power Generation. Thereafter, he began his engineering career—developing Transmission and Distribution systems—spanning from large generator interconnection facilities to individual residential service connections in Louisiana, Arkansas, and Texas.

Greg concurrently pursued his MBA at the Freeman School of Business. Despite a temporary absence while rebuilding electrical infrastructure in the Greater New Orleans area, Greg completed his MBA with a concentration in Finance and Management (including topics in Energy Economics and Risk Management in Energy Markets.) During his absence from New Orleans, Greg pursued power markets with Entergy's Energy Management Organization in The Woodlands, Texas. He has participated in Weekly, Day-ahead, and real time markets (including an assignment as a real-time power marketer, negotiating and executing purchase / sale of electricity and electricity derivative products up to \$5 million / day.)

Since his return to New Orleans, he has served in Transmission Compliance / Policy, pursuing both marketplace and technical challenges associated with a dynamic regulatory environment.
